

GlobalSCAPE Mail Express

Managed Email Attachments Simple. Fast. Secure.

Large e-mail attachments create time-consuming tasks for your IT department. Even worse, however, is when IT isn't involved. Without an easy-to-use system for large file attachments, users resort to unapproved systems such as IM and private email accounts just to get their job done. GlobalSCAPE Mail Express can help.

Let your IT department focus on real work.

With GlobalSCAPE Mail Express, your IT Department no longer needs to create ad-hoc FTP logins, troubleshoot clogged outboxes, or struggle to maintain email servers burdened by excessive file attachments. Users can easily attach large files directly within their email programs, so no end-user training is required upon deployment. Meanwhile, GlobalSCAPE Mail Express works in the background, monitoring for large attachments and automatically transferring those attachments independent of your email servers.

Give your users something they can use.

GlobalSCAPE Mail Express is so simple and transparent, users will no longer resort to using third party services, instant messengers, or even shipping physical media. Not only are these methods cumbersome, but they also cannot be tracked, audited or supported by IT. GlobalSCAPE Mail Express makes daily work easier and your business more secure.

- Compatible with Microsoft Outlook
- Completely transparent to the end user
- Maintain control over file access and permissions
- Transfer files up to 2-gigabytes
- Track and audit file transmission and receipt
- Customize rules and controls to meet your exact needs
